SEARCH & CONNECT

1

Automatically search for Canbat Bluetooth lithium batteries

2

Select your battery to connect to it and to start monitoring

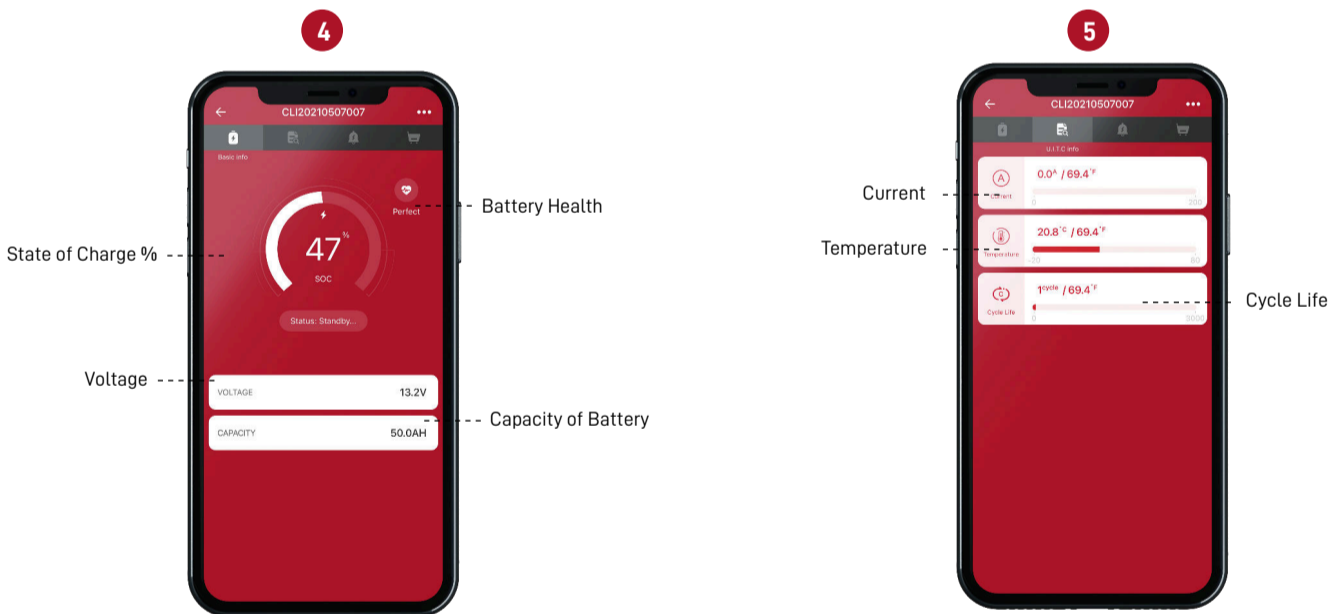

3

This is the main dashboard. From this screen, you will be able to monitor the state of charge (SOC), battery's status, battery's health, voltage and Capacity

If you search and do not find your Canbat Bluetooth lithium battery in the search results, it may be because another device is already connected to it. Only one device can be connected at a time. For example, you can either connect the battery to your smartphone or your tablet, but not both simultaneously. This applies to iOS & Android.

Cycle Life

If the current is displaying a positive figure, it means the battery is charging. If the current is showing a negative figure, it means the battery is discharging. If the battery is charging and discharging simultaneously, the app will show the net current figure. For example, if the battery is charging at 5A and while discharging 7A, the app will show a net current of -2A. Battery's temperature is available in both Celsius and Fahrenheit. Cycles refers to the number of times the battery has been charged and discharged.

A new version of the Canbat app may be available at anytime without notice. Ensure you have the latest version app. If you already have the Canbat BT app, it may not update automatically. To ensure the latest version is installed, delete the existing app and download it again from the app store.

The Canbat BT app is designed for Canbat Bluetooth lithium batteries only. The app will not connect to other devices, such as Canbat WiFi batteries. There is a separate app for those batteries.

You can only connect a Bluetooth lithium battery to one device at a time, such as to your smartphone or to your tablet, but not both simultaneously.
